Juan Antonio Silva Flores

JAVA DEV/ARCHITECT

j.a.silva.f90@gmail.com https://juanantoniosilva90.github.io/ 5548374179

PROFESIONAL CAREER

UP Sí Vale
November 2025-March 2026
Software/Solutions Architect & Dev

Achievements

- Backend Architecture and Development (Java 11 / Spring Boot): Design and implementation of architectural patterns (MVC, Layers, Event-Driven, Modular Monoliths) using Spring Framework, Maven, and Gradle. Performance optimization and code maintainability through advanced debugging, static analysis with SonarQube, and functional refactoring using lambdas, streams, and concurrency.
- Cloud Deployment and Infrastructure (GCP / CI/CD): Management and deployment of PODs on Google Cloud Platform. Implementation of Hotfix pipelines using GitHub Actions and configuration of branching flows for agile production incident resolution.
- Observability and Security: Application security using OAuth 2.0, JWT, and Spring Security for secret management and segregation of duties. Configuration of application monitoring and observability with Datadog.
- Asynchronous Messaging and Events: Application of Inbox/Outbox patterns and incident management on Kafka and RabbitMQ messaging platforms in event-driven architectures.
- Solution Modeling and Third-Party Integration: Technical proposal and architecture modeling (UML / Draw.io) for integrating biometric and data technologies (OCR, Fingerprint, Faceprint, Data Lakes/Data Factories). Creation of deliverables and high-level technical documentation for stakeholders.
- Database and Storage Management: Critical optimization of PL-SQL stored procedures considering high-volume scenarios. Integration and management of Azure resources (CosmosDB, Key Vault) for secrets and NoSQL persistence.
- Quality Assurance and Version Control: Execution of unit and integration tests using JUnit / Mockito. Repository management and code reviews on GitHub and Bitbucket, managing CI/CD pipelines and pull requests.

Neoris de México S.A. de C.V. (Cliente: Telcel)
May 2023-February 2025
Solutions architect

Achievements

- Operational Process Optimization and Cost Reduction: Improved incident management flow, achieving a drastic reduction in resolution time from 48 hours to a range of 15-60 minutes. This involved not only technical optimization of the Hotfix pipeline (GitHub Actions / CI/CD) but also process reconciliation and elimination of bureaucratic procedures that directly impacted the area's financial and technological costs.
- Microservices Architecture and Business-Critical API Design: Design, development, and integration of APIs for customer information and billing domains, applying Microservices, Event-Driven, and Service-Oriented Architecture. Substantial optimization in query response times and data consistency was achieved using Java 11 (Streams, Lambdas, Concurrency) and the Spring Boot framework.
- Architectural Patterns and Cloud Implementation: Application of structural patterns (MVC, Layers, Pipeline) and cloud patterns such as API Gateway, Serverless, and Data Lake to ensure scalability and low coupling of system components. Solution modeling with UML and development based on OOP and Functional Programming principles.

- Asynchronous Communication and Event Management: Implementation of Inbox and Outbox transactional patterns on Apache Kafka to ensure eventual consistency in event-driven architectures. Management and resolution of tickets and incidents related to RabbitMQ message queues.
- Cloud Security and Secret Management: Securing endpoints and third-party applications through configuration of Spring Security, OAuth 2.0, and JWT, applying strict segregation of duties. Centralized management of secrets and sensitive configuration using Azure Key Vault and integration with CosmosDB.
- Quality Assurance and Continuous Delivery: Ensuring code coverage and stability through the creation of unit and integration tests with JUnit and Mockito. Versioning and branching strategy management on GitHub and Bitbucket, orchestrating integration and continuous deployment pipelines in Jenkins and GitLab for controlled hotfix releases.

Sigma Consultoría (Cliente: Tiendas 3B Puebla)
Octubre de 2020-Julio 2022
Java Fullstack Dev Jr

Achievements

- CRM Platform Development and Business Process Optimization: Comprehensive development of a CRM-type platform with complete CRUD operations, achieving significant acceleration of sales, billing, and inventory processes. The solution centralized customer and transaction management, reducing operational friction and improving business response times.
- User Experience and Interface Design: Creation of an intuitive and user-friendly interface focused on reducing the learning curve for operational staff and increasing system adoption. Usability and smooth navigation were prioritized to optimize daily commercial management tasks.
- Resilient Frontend-Backend Communication Architecture: Implementation of a robust, fault-tolerant communication layer between the frontend and backend services. Data integrity and service continuity were ensured through asynchronous messaging patterns with Kafka (applying Inbox/Outbox patterns for transactional consistency) and queue management with RabbitMQ for incident resolution and background ticket processing.
- Security and Access Management: Securing platform endpoints and functionalities through Spring Security configuration, applying principles of duty segregation and centralized secret management. Access control for third-party applications was implemented, ensuring confidentiality of customer and billing information.
- Cloud Integration and Persistence (Azure): Configuration and maintenance of Azure resources, including NoSQL storage with CosmosDB for platform data and the use of Azure Key Vault for secure management of credentials and connection strings.
- Quality Assurance and Software Lifecycle Management: Development of unit and integration tests with JUnit and Mockito to validate business logic and component communication. Code versioning management using branching strategies on GitHub and Bitbucket, and automation of deployments and hotfixes through CI/CD pipelines configured in Jenkins, GitLab, and GitHub Actions.

DEGREE AND COURSES

- August 2016- 2016-Februeary 2020
    - Computer Engineering; Tecnológico de Estudios Superiores de Ecatepec
- August 2025
    - Associate Solutions Architect, Amazon Web Services; (Test Date to be defined)
